

Quality Control

Accutool has a full range of quality measuring equipment including a Brown & Sharp DEA Computer Measurement Machine.

Accutool understands that consistent high quality production and service is a prerequisite to sustainable business for us and for our customers.

We apply techniques such as Failure Mode and Effects Analysis (FMEA) and Production Part Approval Process (PPAP) in addition to Statistical Process Control (SPC).

Consistent quality products for 25 years

- ISO 9000 Quality Standard since 1994
- Introduction of ISO 9001:2008 in 2012
- Statistic production control
- High end products

- Commitment to our clients has delivered quality end results, short lead times and value for money
- We constantly review our processes with the aim of continual improvement
- We offer contract measuring using our CMM
- To ensure the highest standard of quality we use the latest PC-DMIS that enables the Computer Aided Verification of geometry by allowing 3D scans to be superimposed over imported CAD data.
